## CONCEPT

Walk&Talk is a game that can be used for brainstorming. Each person in the game is assigned an initial projected colored territory, which they can expand by walking.

If they don't walk, their territory gets smaller and almost disappears. If they want to have their own area to stand own, they need to always be on the move.

If they don't talk (to brainstorm or just chit chat), a terrible sound will be played. This way, someone has to talk in order to keep the terrible sound from playing.
